

National Severe Weather Warning Service

Chief Forecasters Assessment

Warm, humid air is likely to be pulled northwards from France late on Friday and during Saturday. Within this airmass, there is an increasing likelihood that heavy, thundery showers will break out. It is likely that many places within the current broad warning area will miss the worst of the storms; over the next few days it may be possible to focus on the areas most at risk.

The Met Office have issued a **Yellow Alert of Rain**

Valid from **00:15 on Sat, 07th Jun 2014** until **23:45 on Sat, 07th Jun 2014**

Thundery downpours are expected to affect parts of England, Wales and southern counties of Scotland during Saturday. The public should be aware of the potential for localised flooding due to the intensity of these storms, although at this stage the location of the heaviest rainfall is uncertain.
